

## Mastering Nightfall with Superior Efficiency

NoctuVision image intensifiers represent the pinnacle of high-performance nocturnal imaging technology. Our tubes, available in both green and white phosphor, cater to diverse user requirements with various Figure of Merit (FOM) criteria. With NoctuVision, you're not just choosing an image intensifier, you're opting for the finest solution tailored to your specific needs.

Employing cutting-edge technology, NoctuVision tubes transcend the traditional limitations of night vision applications. They extend not only the range of visibility, but also the level of detail that can be discerned in low-light conditions. The enhanced Figure of Merit (FOM) attributes to an optimized balance of resolution and sensitivity, offering users a significant operational advantage when it comes to nocturnal exploration or surveillance.

The swift Auto-Gating functionality further enhances the user experience by rapidly adjusting to changes in lighting conditions. This ensures a consistent and clear image, mitigating the risk of momentary blindness or image washout due to sudden exposure to bright light.

In a world that doesn't stop when the sun goes down, NoctuVision tubes empower you to fully engage with the nocturnal landscape. Experience the extra range, enhanced detail, and night-time clarity that only NoctuVision can deliver.

The NoctuVision showcases an amalgamation of cutting-edge Gen 3 technologies, pushing the boundaries of innovation in its manufacturing process.
